

AX 01

AX 02

32

The Academy programme also includes two crossover systems result of calculations, measurements, electro-acoustic tests and, first of all, many hours of listening together with our unique experience in the field of installation. We have built them focusing on the calibration method and on the consequent results in terms of sound. AX 01 and AX 02 have been conceived not only to make Academy loudspeakers sound better, in any car and for any music genre, but also to satisfy your idea of Sound Quality in a relatively short period of time, with simple and gradually organized adjustments, which enable to shape the audio timbre to your taste. Even before receiving your AX 01 and AX 02, our technicians have already carried out a default adjustment, which enables you to directly install them without any further interventions.

Inside the crossover package there is a manual that shows what is necessary for the wiring and calibration of the devices as to obtain the best from the installed system. Two different solutions are proposed: EASY TUNE, to obtain an excellent result, and EXPERT MODE, with suggestions to obtain the best from the filter through more complex configurations and fine tune procedures.
